Phone 780-988-9174

Print clearly and enclose *Hair Sample* in a plastic bag (6-10 hairs about 1 inch length)

Testing not effected by bleaching or coloring

Name _____ Phone _____

Address

Zip/postalCode _____

Name of Registered User (if applicable): _____

Clearly Print the supplement you wish tested in the left column. The minimum is 5 supplements for \$10.00 and \$2.00 for each supplement after that. This price includes sales tax. We will send this page directly back to you. IF the supplement is one not commonly found in a health food store, please send a sample.

↘ _____ **Total Amount Enclosed** (check or money order in US funds payable to Abundant Growth)

Name of supplement to test	Description of common activity or benefits.	Vitality enhancement or inhibition

Welcome to the Food Sensitivity Testing portion of Vitality Analyses! Vitality Analyses uses a specially designed Bio-computer used by a highly trained technician to analyze the potential effects of foods on our Whole Body Vitality (WBV). Our research has found that the WBV can be enhanced through choosing foods that enhance our WBV.

Whole Body Vitality Food Inhibitors/Enhancers Biocomputer simulations were undertaken on the previous supplements to determine the theoretical affect of eating these foods on your Whole Body Vitality. The procedure consisted of measuring your baseline Whole Body Vitality (WBV) and then measuring the theoretical impact on your WBV if you were to eat the foods listed. Our research has shown that if you favor supplements in your diet that have a reading from 0 to 800 (WBV Enhancers), your WBV can be improved over time. Conversely, minimizing the consumption of foods with a negative reading (~WBV Inhibitors), can also enhance your WBV.
